RASA Towers - Bangkok, Thailand

Lighting up the gateway to Bangkok with an accentuating lighting display

Situated strategically on Phaholyothin Road in Bangkok, Thailand, the RASA Tower blocks stand at the gateway to all major parts of the city, including the commercial business district. Integrating international standards with contemporary design, the twin towers represent a true understanding of modern business needs.

To satisfy the stringent design needs for the towers, OSRAM Lighting Solutions pulled out all the stops. The façades of the two towers have been adorned with the versatile Traxon Media Tube® RGB and output a coordinated display of dynamic light. Integral to the installation is the slew of e:cue Lighting Control Engine 2 fx that provides the media content for the Media Tube® and can easily be programmed for dynamic color-changing patterns or even static single color output.

OSRAM Lighting Solutions is proud to have been involved in this project, assisting all the way from the designs through to installation. We utilized our in-depth understanding of lighting to provide a complete solution, because we believe that it is a superior solution.
