

Suzhou Center - Suzhou, China

The Suzhou Center plaza lies on the west shore of the Jinji Lake, a nationally renowned 5A tourist attraction. With a total construction area of 1,130,000 square meters, it consists of 1 large one-stop shopping mall and 7 other commercial buildings. The highlight of the complex is the Suzhou Center. It is commonly known as the “Wings of Future” due to its self-evident structure, representing city’s wonderful prospects and great ambitions. The project is incredibly huge in size. The “Wings of Future” solely boasts a rooftop of 36,000 square meters – the world’s largest free-flowing curved surface and skylight roof with seamless connection. Lit by more than 22,000 of Traxon Media Tube® RGB and Dot XL luminaires, now the “Wings” would spread wide in a colorful aura when the night comes. e:cue control system has also been chosen and installed in the architecture to offer flexibility. Butler PRO controllers and Lighting Control fx server are now integrated into the buildings’ system to offer centralized smart management of the luminaires. The completion of this project has finalized Suzhou’s only modern one-stop commercial center and established an unprecedented and diversified CBD zone, which is the key to Suzhou’s next economic take-off. The “Wings of Future” and the “Gate to the East” now shine brightly and add radiance to each other at night, creating a glamorous open space for nearly 10,625,700 locals and a lighting spectacle by the Jinji Lake.
