

The Jaipur City, India

Jaipur is one of the most marvelous destinations in Asia. Founded by Rajput rulers and the royal families, Jaipur is rich in culture and the home of heritage monuments. Surrounded by shops and roadside stalls, the City Palace complex lies in the busiest area in the city. Extensive lighting has been urgently needed to brightly light up this central place, provide clear vision for motorists/pedestrians, and put Jaipur on an easier path to prosperity.

6613 pieces of lights, including the Traxon Nano Linear Allegro, Traxon Washer Allegro, OSRAM ARCHISHAPE® Washer and the OSRAM ARCHISHAPE® Linear Wall Washer Mini, were selected to meet the unprecedented task: in a 5.7 km stretch of the city comprising 425 heritage monuments, 30 different type of lights were designed in 15 different variants of beam angles and 8 different color temperatures to restore life to the architectures. The structure of the architectures has been all adorned with lights, and their silhouettes are visible from miles away. The heritage monuments now at night hypnotize the walking crowd and speak aloud about the core and culture of the city, bettering the nightlife of over 3 million local residents.

The success of this project transforms the Jaipur city into an iconic site at night as it is in the day. With state-of-the-art dynamic lighting technology, OSRAM Lighting Solutions has become the leading brand in this field, and is continuously setting new benchmarks to inspire the world.
