

Mounting

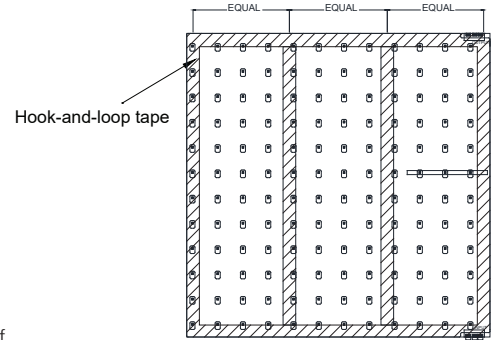

! Do not hold the MWP at the Input or Output port !

• Preparation:

Clean the mounting surface of grease and dust. The surface should be dry and clean when attaching the hook-and-loop tape.

• Mounting - requires two persons:

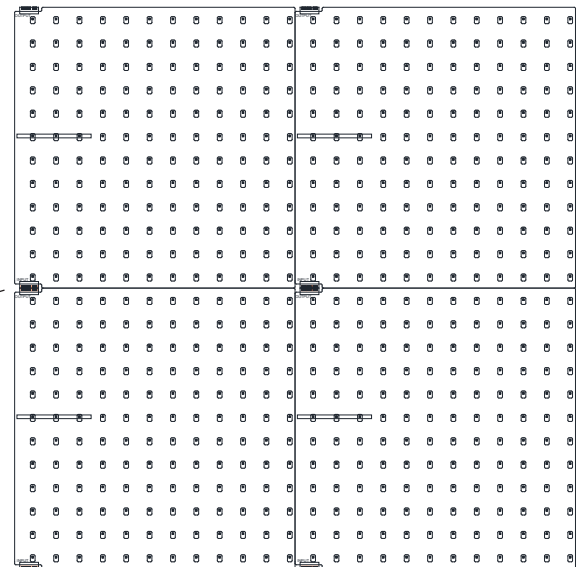

1. Attach the self-adhesive hook-and-loop tape at the rear side: Fasten both the hook-and-loop tape sides together on the MWP with the softer side on the MWP. Fasten the tape around the perimeter and vertically twice as shown in the illustration. Avoid double layer to prevent an uneven surface of the MWP.

Rear view

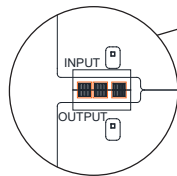

- Clip three TX CONNECT Smart Extension Connectors to each Input port (ADD1, ADD2, ADD3, and ADD4 as required).
- Remove the backing paper of all tapes on all MWP.
- Mount the first MWP (ADD1) onto the surface: Attach the MWP complete with the hook-and-loop tape onto the prepared surface using light gentle pressure to ensure the hook-and-loop tape is fastened evenly. Apply evenly from the Input port outwards.
- Let a second person hold the next in line MWP (ADD2). Do not hold the MWP at the Input or Output port. Connect the next in line MWP (ADD2) to the preceding MWP (ADD1): attach the Connectors at the Input port of the next in line MWP (ADD2) to the Output port of the preceding MWP (ADD1).
- Mount the next in line MWP (ADD2) onto the surface: Attach the MWP complete with the hook-and-loop tape onto the prepared surface using light gentle pressure to ensure the hook-and-loop tape is fastened evenly. Apply evenly from the Input port outwards.
- Repeat steps 5 and 6 for each further MWP and mount all MWP. Please consider the right addressing order.
- Attach all required TX CONNECT Smart Adapter and TX CONNECT Smart cables to the mounted Media Wall Papers.

Mounting Multiple Media Wall Paper

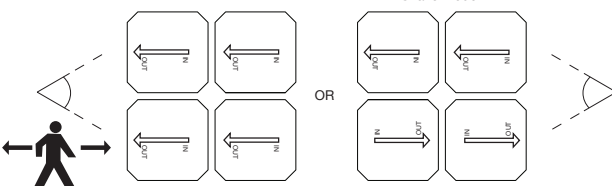

Mounting Accessories

- TX CONNECT Smart IN Adapter Media Wall Paper Black
- TX CONNECT Smart OUT Adapter Media Wall Paper Black
- TX CONNECT Smart Starter Adapter Media Wall Paper Black
- TX CONNECT Smart Extension Connector Media Wall Paper Black / White
- Velcro Strip role (Hook-and-loop tape, white/ black, soft side to be fixed on Media Wall Paper, rough counterpart to be pasted on the surface)

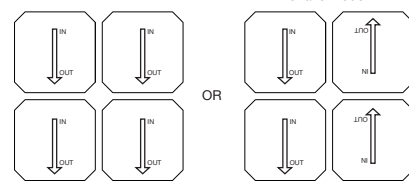

Orientation and Color Mixing

For left or right viewing angles, align the luminaires left to right or right to left.

For top or bottom viewing angles, align the luminaires top to bottom or bottom to top.

- For best color mixing results, ensure the luminaires have the same orientation and remain parallel to the main movement pattern of the viewer.
- If same orientation cannot be achieved, ensure the orientation of the luminaires that snake back are 180° to the previous row / column and consider the main movement pattern of the viewer.
