Crystal Lounge - Paris, France

The Crystal Lounge is a new night club in the heart of the Golden Triangle in Paris. A private club dedicated to an original approach of clubbing just behind the famous Champs Elysees Avenue. Sound and Light Systems were chosen based on partnership and collaboration with the company Interdits de Nuit. The Crystal Lounge finally decided to choose a few interactive medium resolution LED screens to create the right ambiance using Traxon Technologies's 64PXL Board RGB: 3 LED screens at the entrance to welcome visitors and to announce the program. After descending the long stairs to enter the main room you see what makes the difference here: a unique and very creative shaped 18m long LED wall throughout the club main area is installed behind the DJ booth with over 140 DMX universes via Micro Server and e:cue's LCS 1. The server used allows stunning Sound-to-Light effects and easy interfaces for live programming during private parties. The Crystal Lounge attracts a lot of clubbers and is becoming one of the Parisian place to be.
