

SHOWCASE

AB Concept Office - Hong Kong, China

Located in Hong Kong, AB Concept is an innovative interior design company that focuses on unique, luxury hospitality projects around the world. AB Concept chose Traxon Technologies' sophisticated lighting solutions to adorn their office's meeting room creating a virtual sky, which is viewed through a skylight. 64 Traxon 16PXL Board RGB with individually controllable high-performance LEDs, were installed on the ceiling of the meeting space. With the capability of displaying low and medium-resolution graphic animations, text or video, the 16PXL Board RGB is able to simulate weather conditions, such as a blue sky with clouds. All of the installation's lighting effects are seamlessly controlled by e:cue lighting control's Butler XT and three Butler. In addition, e:cue's Glass Touch T6R user terminal, paired with the IR Remote Control, further facilitate easy control of this installation.
