

SHOWCASE

Hong Kong Coliseum (Outdoor Façade) - Hong Kong, China

The Hong Kong Coliseum, located in the heart of Kowloon, is the second largest indoor stadium in Hong Kong. Its unique design of an inverted pyramid renders it amongst one of the most eye-catching landmarks in the city. Offering more than 12,500 seats, the Hong Kong Coliseum is a multipurpose venue for all kinds of occasions such as international conferences, performances, shows and sport events, attracting visitors from all over the world. The eye-catching outdoor façade has been highlighted by Traxon's Wall Washer XB-36 RGB, embracing the building with colorful, vibrant light scenes. The high power LEDs of this lighting fixture generate rich wall-washing effects, changing any flat surfaces into an ocean of colors. For a perfect illumination of the demanding structure of the building, 36 Wash XB fixtures have been installed in different beam angles, illuminating the façade from all corners. The usage of Traxon's LED Engine XB-SD, comprising preset lighting scenarios for different purposes, provides the customer with flexible lighting control and renders a visit of this special venue a memorable lighting experience.
